INDEX OF VOLUME III

Ankeny, N. C. and Chowla, S. *The class number of the cyclotomic field*, 486
ApSimon, H. *Two vertex-regular polyhedra*, 269

Berman, G. *A generalization of the Pappus configuration*, 299
Bing, R. H. *Metrization of topological spaces*, 175
Bochner, S. *A new viewpoint in differential geometry*, 460
Brauer, A and Reynolds, T. L.* *On a theorem of Aubry-Thue*, 367
Bruck, R. H. *Finite nets, I. Numerical invariants*, 94
Burchnall, J. L. *The Bessel polynomials*, 62
Byrne, L. *Short formulations of Boolean algebra, using ring operations*, 31

Chowla, S., Herstein, I. N. and Moore, W. K. *On recursions connected with symmetric groups I*, 328
——— *See* Ankeny and Chowla
Chung, J. H. *Modular representations of the symmetric group*, 309
Coddington, E. A. and Levinson, N. *On the nature of the spectrum of singular second order linear differential equations*, 335
Coxeter, H. S. M. *Extreme forms*, 391
Croisot, R. *Axiomatique des lattices distributives*, 24

Derry, D. *The duality theorem for curves of order n in n-space*, 159
Dieudonné, J. *Sur le théorème de Lebesgue-Nikodym (V)*, 129
Dirac, P. A. M. *The Hamiltonian form of field dynamics*, 1
Dowker, C. H. *On countably paracompact spaces*, 219
Du Val, P. *On regular surfaces of genus three*, 148

Ellis, D. *Autometrized Boolean algebras I: Fundamental distance-theoretic properties of B*, 87
——— *Autometrized Boolean algebras II: The group of motions of B*, 145
Ellis, H. W. *Darboux properties and applications to non-absolutely convergent integrals*, 471
Erdös, P. and Shapiro, H. N. *On the changes of sign of a certain error function*, 375

Fraser, D. A. S. *Normal samples with linear constraints and given variances*, 363

Hall, M. and Ryser, H. J. *Cyclic incidence matrices*, 495
Halperin, I. and Nakano, H. *Distrete semi-ordered linear spaces*, 293
Heilbronn, H. *On Euclid's algorithm in cyclic fields*, 257
Herstein, I. N. *See* Chowla, Herstein and Moore
Hlavatý, V. *Spinor space and line geometry*, 442
Hua, L. *On exponential sums over an algebraic number field*, 44
Hutcherson, W. R. *A cyclic involution of period eleven*, 155

Infeld, L. and Scheidegger, A. E. *Radiation and gravitational equations of motion*, 195

Jenkins, J. A. *On the topological theory of functions*, 276

*The initial "T" was accidentally printed as "R."

Kaplansky, I. *A theorem on division rings*, 290
Kelly, L. M. *Distance sets*, 187
Klee, V. L., Jr. *On certain intersection properties of convex sets*, 272
Kodaira, K. *Green's forms and meromorphic functions on compact analytic varieties*, 108

Lambek, J. *The immersibility of a semigroup into a group*, 34
Levinson, N. *See* Coddington and Levinson
Lorentz, G. G. *Direct theorems on methods of summability II*, 236
Lukacs, E. and Szász, O. *Certain Fourier transforms of distributions*, 140

Macbeath, A. M. *A compactness theorem for affine equivalence-classes of convex regions*, 54
Macphail, M. S. *Some theorems on absolute summability*, 386
Moore, W. K. *See* Chowla, Herstein, and Moore

Nankano, H. *See* Halperin and Nankano
Nakayama, T. *Non-normal Galois theory for non-commutative and non-semisimple rings*, 208

Pall, G. *See* Porcelli and Pall
Porcelli, P. and Pall, G. *A property of Farey sequences, with applications to qth power residues*, 52

Reeb, G. *Sur les solutions périodiques de certains systèmes différentiels perturbés*, 339
Reynolds, T. L.* *See* Brauer and Reynolds
Ryser, H. J. *See* Hall and Ryser

Scheidegger, A. E. *See* Infeld and Scheidegger
Schwartz, L. *Analyse et synthèse harmoniques dans les espaces de distributions*, 503
Shapiro, H. N. *See* Erdös and Shapiro
Sholander, M. *Postulates for distributive lattices*, 28
Stanton, R. G. *The Mathieu groups*, 164
Steinberg, R. *The representations of $GL(3, q)$, $GL(4, q)$, $PGL(3, q)$, and $PGL(4, q)$*, 225
Szász, O. *See* Lukacs and Szász

Truesdell, C. *Vorticity averages*, 69

Val, P. Du. *See* Du Val

Willcocks, T. H. *A note on some perfect squared squares*, 304
